

Dashboard application + API Integration Project

Project Overview

In this project, students will build a **modern dashboard web application** using frontend technologies and **public APIs**.

You are expected to **search the Figma Community for UI designs or templates**, use them as inspiration, and implement the interface in code as a frontend dev.

The application should include **authentication pages, a landing page and a dashboard** that displays data from external APIs.

Students will also deploy their project online.

For Your UI Design:

You can join the figma community and find a UI design to replicate the interface.

Figma Community

<https://www.figma.com/community>

You can search for:

- Dashboard UI
- Learning Platform Dashboard
- Admin Dashboard

Project Pages

1. Authentication

A. Login Page

Required elements:

- Email field
 - Password field
 - Remember Me checkbox
 - Forgot Password link
 - Login button
 - Link to Sign Up page
-

B. Sign Up Page

Required elements:

- Full Name
 - Email
 - Password
 - Confirm Password
 - Sign Up button
 - Link to Login page
-

C. Forgot Password Page

Required elements:

- Email field
- Reset button
- Success message

API documentation reference: <https://simple-crud-backend-6o49.onrender.com/docs>

Base URL: <https://simple-crud-backend-6o49.onrender.com>

2. Landing Page

Create a landing page with the following sections:

Hero Section

- Logo
- Navigation (Home, Features, About, Contact, Login & Signup)
- Headline
- Short description
- Call-to-action button (e.g., "Get Started")

Features Section

- 3–4 feature cards

About Section

- Short description of the platform

Footer

- Navigation links
- Social icons

No external API required – static content.

3. Dashboard (After Login)

The dashboard should include:

- Sidebar navigation (Courses, log-out)
- Top navigation bar (Logo, avatar and can also include the user name)
- Main content area (list of fetched courses in a grid or card layout)

API documentation reference: <https://fakestoreapi.com/docs>

Fake Store API: <https://fakestoreapi.com/products>

4. Course Detail Page

When a user clicks a course from the dashboard, they should be taken to a **Course Detail Page** that displays more information about that course.

API Endpoint: Use the Fake Store API to fetch a single course:

GET /products/:id

Example: <https://fakestoreapi.com/products/1>

Technology Options

You can choose to use either of the options below:

Option 1: HTML + Tailwind or custom CSS + JavaScript (Fetch API) – Vanilla JavaScript

Option 2: ReactJS + Tailwind or custom CSS

Deployment & Submission

Push your code to Github, host your project on either Vercel or Netlify then submit both your **live link** and **github repository link** on the dashboard.

Deadline

Saturday, March 28, 2026 at 11:59 PM.

Goals

By completing this project, students should:

1. **Use a clean, modern UI** in Figma that aligns with the given requirements (auth, landing page, dashboard. Check out **“figma community”**).
 2. **Apply consistent design principles** — typography, spacing, color palette, and component usage.
 3. **Use reusable components** (e.g., buttons, cards, navbar, and sidebar).
 4. **Make the design responsive-friendly**, creating both desktop and mobile views.
 5. **Conduct research** to explore suitable UI inspirations, best practices and patterns (e.g., Dribbble, Behance, or real-world SaaS dashboards).
 6. **Use creativity in UI choices** — students are free to choose icons, imagery, and layouts that fit the problem context.
 7. **Integrate external APIs** (provided in the brief) into their code implementation to simulate real-world data usage.
-

Good Luck!
